

CONTENTS

ABSTRACT	v
1 INTRODUCTION	1
(A) History of research on mixtites	2
(B) Previous research on the Port Askaig formation in Scotland	3
(C) Method of treatment	4
2 STRATIGRAPHICAL OUTLINE	5
(A) Position of the Port Askaig formation in the Dalradian succession	5
(B) Lithology and sequence	5
(C) The type succession	6
(D) Correlations	8
3 SPECIAL FEATURES OF THE SEDIMENTS	11
(A) The mixtites	11
(i) The lower contacts of individual mixtites	11
(ii) Internal bedding in mixtites	12
(iii) Soft sediment fold structures	16
(iv) Sandstone downfold structures	18
(v) Pebble fabric in the mixtites	23
(B) The interbeds	25
(i) Palaeocurrent systems	25
(ii) The origin of the conglomerates	29
(iii) Erosion surfaces	31
(iv) Beds of dolomite	32
(v) Outsize stones in bedded sediments	34
(vi) Varves	36
(vii) Deflection and penetration of laminae about ice-rafted stones	38
(C) Other structures	39
(i) Sandstone wedges	40
(ii) Sandstone dykes	45
(iii) The periglacial origin of the sandstone wedges	49
(iv) Irregular sandstone veins	53
(v) Stellate structures—possibly crystal pseudomorphs	53
4 PETROGRAPHY	54
(A) The stones	54
(B) The sediments	54
(C) The upward change in stone content and lithology within the formation	55
(D) Conclusions	56
5 PETROGENESIS OF THE MIXTITES	56
(A) The possible origins of mixtites	56
(B) Deposition from downslope movements powered by gravity	57
(i) Slumping, sliding or gliding	57
(ii) Plastic mass flow	58
(iii) Pulsatory turbulent flow	59
(C) The evidence against a mudflow origin for the mixtites	61
(D) The evidence in support of a glacial origin for the mixtites	63
(i) Criteria used as evidence of former glaciations	63
(ii) Glacial criteria applied to the Port Askaig formation	63
(E) The mechanism of glacial deposition	65
(i) The opinions of workers on other tillites	65
(ii) Discussion of the evidence used by workers on other tillites to infer deposition from floating ice	66
(iii) Deposition of the Port Askaig tillite from a grounded ice-sheet	67

6	THE GLACIAL RECORD OF THE PORT ASKAIG TILLITE	69
7	DESCRIPTION OF STRATA	71
(A)	Introduction	71
(B)	The Garvellachs	72
(i)	The Islay Limestone	72
(ii)	The Port Askaig Tillite	75
(C)	The Port Askaig area, Islay	86
(i)	The Islay Limestone	87
(ii)	The Port Askaig Tillite	87
(iii)	The Upper Dolomitic Formation	91
(D)	The Mull of Oa, Islay	91
(E)	Fanad, Co. Donegal	92
(F)	Schichallion	93
(G)	Braemar	94
(H)	Banffshire	94
8	ACKNOWLEDGEMENTS	94
9	REFERENCES	95
