PLATES

- Plate 1. England and Wales. A palaeogeological map of the Lower Palaeozoic floor below the cover of Upper Devonian, Carboniferous and later formations with inferred and speculative reconstructions of the Lower Palaeozoic and Precambrian outcrops in adjacent areas. Scale: 1/625,000 or about ten miles to one inch. Completed October 1975.
N.B. The crimson colour for the Silurian has been inadvertently omitted from the map between the putative interpretation and the coastline in Yorkshire.
 Bobbing should be 9 km S.W. of Sheerness B.H.
 Fobbing, add Cambrian? below M.Devonian.
- Plate 2. An inferred palaeogeological map of Wales and of England south of National grid Latitude 40 North, assuming the removal of all O.R.S.-Devonian and later formations, to reveal the outcrops at the close of Silurian times. The map records the sites of some 111 boreholes that reached the L. Palaeozoic or Precambrian formations, plus the sites of certain magnetic anomalies and other features. For a list of these, see Appendix. Scale: 1/625,000 or about ten miles to one inch. Completed August 1977.
